BRI-TECH ENGINEERS MODERN BOARD ROOMS THAT ARE TRANSFORMATIVE BY DESIGN.

1 | **ACOUSTIC WALL & CEILING PANELS**
Properly engineered acoustic treatments ensure perfect intelligibility, mitigating echos and reflections from hard surfaces that cause delays in transmission, resulting in miscommunication and increased effort leading to fatigue.

2 | **CONTROL THE ROOM**
Control HVAC, shade e-glass, and other environmental aspects to your presentation, with integrations that work with industry-standard presentation programs such as MS Teams and Zoom, it is all in your control.

3 | **WINDOWS AND GLASS WALLS**
Motorized shades and electronically dimmable glass ensure privacy and control sunlight.

4 | **LIGHTING**
When engineered properly, downlighting and cove lighting can be used to elevate space, mitigate shadows and offer reflections that light presenter and particpant faces.

5 | **DUAL DISPLAY & SIGHT LINE CHOICES**
Design choices like the V table and dual displays ensure eye-contact and sight lines of both in person and remote participants.

6 | **DIGITAL PTZ CAMERA**
Digital auto framing allows the speaker to be front and center to the remote viewer, ensuring body language is relayed. Camera and processor engine can create multiple images simultaneously.

7 | **BEAMFORMING MICROPHONE ARRAY**
Ceiling-mounted microphone array is dynamically focusable and responds to voices, eliminating table noise associated with table-mounted microphones.

8 | **DIGITAL AUDIO SIGNAL PROCESSING**
Technologically superior Dante Level 3 programmers set dozens of parameters for optimal performance. Advanced active filtering removes HVAC sounds and other noises, delivering the best sound quality to remote users.

9 | **HALO SPEAKER PLACEMENT**
Placing a larger quantity of smaller speakers in a ring formation overhead and slightly behind the participants, aligns sound with participants' hearing for a balanced sound without the need for excessive volume.

10 | **WIRELESS CALL CONTROL TOUCHSCREEN**
A dedicated device that allows users to control the call, add callers, dial out, mute, and end the call. The call controls and room controls are separate, reducing the risk of operator error interruptions. Integrates with MS Teams or Zoom One Touch Join.
